GitHub: https://github.com/LakhandRathod | LinkedIn: [https://www.linkedin.com/in/lakhan-devidas-rathod/]

PROFESSIONAL SUMMARY

Computer Engineering student developing practical data analytics skills in Excel, SQL, Python, and data visualization. Familiar with data cleaning, handling missing values, removing duplicates, exploratory analysis, and presenting findings. Seeking an entry-level Data Analyst or Data Analytics Intern opportunity to support data preparation, reporting, and business decisions.

TECHNICAL SKILLS

Analytics: Microsoft Excel (sorting, filtering, formulas, PivotTables — list only topics you can demonstrate), data cleaning, basic exploratory data analysis

Programming & Data: Python, Pandas, SQL, MySQL

Visualization: Power BI, Tableau (learning/practice)

Tools: Jupyter Notebook, Git, GitHub

PROJECTS

Python GUI Smart-data-cleaner-pro | Python, Pandas, Tkinter, Excel

- Developed/practiced a GUI workflow to import Excel data and apply selected cleaning operations such as duplicate removal, blank-row handling, and whitespace trimming.
- Designed export of cleaned data to a separate output file while preserving the raw input.
- Add verified project metrics: dataset size, number of rows cleaned, validation checks, and repository/demo URL.

Sales Intelligence Dashboard | Python, Pandas, Streamlit, Plotly, Git & GitHub

- Portfolio project plan: analyze sales by date, product, and region; calculate revenue, order count, and average order value.
- Create KPI visuals and summarize trends after completing the analysis; include dataset source and dashboard link.

EDUCATION

B.Tech, Computer Science Engineering | Aditya Engineering College, Beed
Dr. Babasaheb Ambedkar Technological University (DBATU) | Expected 2027
Relevant coursework: Database Systems, Python Programming, Data Analytics, Software Engineering

ADDITIONAL EXPERIENCE

Add verified employer, job title, location, dates, and 2–3 factual responsibility bullets here if you want to include prior industrial/contract work. Keep it accurate and avoid claiming analytics duties unless performed.

CERTIFICATIONS

Add completed certifications only: course/provider, completion month and year, and credential URL. Suggested areas: SQL, Excel for Data Analytics, Python, Power BI.
